

Group: AssemblyViz

Total: 9 / 10

Presentation: 4.5 / 5

- **Strength:**
- Strong functionality and useful features (e.g., visualization, export to Gradescope).
- Clear demonstration of system behavior and educational value for learning assembly.
- **Weakness:**
- A user story is often unclear or not explicitly stated.
- UI/UX issues, including a cluttered interface and difficulty understanding how to use some features.

GitHub Repository Maintenance: 4.5 / 5

- The repository is easy to navigate.
- The README also explains the structure clearly, and the backend/frontend folders each have their own README files.
- The code and docs use meaningful names such as parser.py, assembler.py, simulation.py, registers.py, MemoryPanel, ResultsPanel, and RegisterPanel.
- Strong evidence of ongoing work, but the messages are inconsistent in quality, e.g., commit messages like resolving conflicts, removing files, etc.
